Course Overview

Course Name: BSc (Geography and Geosystems)

CAO Code: GY134

Course Level: 8

Duration: 4 years

**Min Entry Points
2024:** 350

**Entry
Requirements:** Minimum Grade H5 in two subjects and passes in four other subjects at O6/H7 level in the Leaving Certificate, including Irish, English, Mathematics, a laboratory science subject (i.e. Chemistry, Physics, Biology, Physics with Chemistry (joint), Computer Science or Agricultural Science) and any two other subjects recognised for entry purposes.

Why Study This Programme?

As a graduate of this programme, you will become an expert in human-environment relationships with the skills to assess the spatial dynamics of the natural world and manage our natural environment and heritage

Work Placement

In Year Three of the programme students have the option to participate in targeted work or research-based internships (January–August), study abroad, or enrol in further study at University of Galway. A dedicated member of staff coordinates and places every student within their selected sector and tailors their training and experience. Students will also undertake the module “Career Development and Readiness“, to prepare them for their future careers. There is considerable evidence that participating in professional work placements improves student performance in final year.

Career Opportunities

Geography is crucial in informing genuine public concerns about environmental loss and degradation, as well as human-induced climate change. The Geography & Geosystems programme offers clear pathways that lead to an array of career opportunities across a wide range of interests including governmental, policy, and business sectors. Guidance will be offered throughout the programme to ensure students are undertaking the most appropriate modules for their own personal career goals and development.

Study abroad

University of Galway students have the opportunity to study at one of our partner universities abroad as part of our ERASMUS programme. ERASMUS is popular because of the academic, social, personal and professional benefits it brings. There is considerable evidence that participating in ERASMUS improves student performance in final year.

Course Outline

Year One

Year One of the programme introduces students to the fundamental concepts that govern both Physical and Human Geography. In parallel, students will receive a foundational scientific understanding of principles that govern the natural world (e.g., Biology, Physics, Chemistry, and Mathematics).

Year Two

In Year Two, core modules focus on traditional Physical Geography (Climate, Biogeography, and Earth surface & interior processes) alongside introductions to Environmental Law and Statistics. In addition students will choose two of the four possible pathways:

1. Coastal and Marine Science
2. Ecosystems Sciences
3. Environmental Planning and Policy
4. Paleo-Sciences

Year Three

Study Abroad – Work Placement – Research Placement – Further Study

Semester 1: Core modules in Semester 1 focus on the introduction to GIS, alongside the development of career readiness and research design. These skills will support the student in Semester 2, regardless of their chosen pathway, and in Year Four, when they must apply their research and technical skills during their independent research projects.

Semester 2: The work placement or internship will enable students to apply their class-based skills critically in a real-world setting. Students will also have the option to travel to one of our partner universities abroad as part of the ERASMUS programme. Students opting to complement their portfolio with further studies will have the opportunity to enrol in modules from pathways and/or modules that they have not chosen in Year Two.

Year Four

In Year Four, a large portion of the students' efforts will be dedicated to an independent research project supervised by staff members in Geography. In parallel, students will further develop their GIS skills and advance their understanding in the pathways of their choices to deepen their knowledge and understanding in these areas.
